NEW BUFFALO

(A new creation of the N. Y. State Exp. Sta.)

Buffalo is our finest flavored blue grape. It has a delicious flavor that defies description. Juicy, sweet, with melting tender flesh and delightful aroma. Not only is the quality of the best but the vine is a heavy and regular bearer. Clusters and berries are large, loosely formed and covered with a delicate blue bloom. A very vigorous grower, hardy and free from disease. We have grown it to perfection without spraying in our test vineyard. Makes fine grape juice and jellies.

SHERIDAN

GRAPE GROWING MADE EASY THE MILLER WAY

You can easily grow grapes as good as the ones pictured in our catalog.

HERE'S HOW WE INSURE YOUR SUCCESS

With every order of grapes we include our FREE PLANTING and PRUN-ING GUIDE.

This booklet tells by words and pictures exactly how to care for your vines from planting to harvest. How to prune, how to plant, cultivate, fertilize, spray and erect the trellis. In fact it includes every bit of necessary information for growing grapes successfully. This illustrated guide is based on our 70 years of grape culture. It features the Miller method of growing grapes. Ours is so easy and simple to follow that anyone can grow grapes that will be the envy of all the neighbors.

MILLER'S BETTER GRAPES 15 Best Varieties

SELECTED FROM MORE THAN 40 VARIETIES IN OUR VINE-YARDS. THEY INCLUDE THE BEST COMMERCIAL AS WELL AS THE BEST HOME GARDEN VARIETIES LISTED IN ORDER OF RIPENING.

VERY EARLY GRAPES (August 20-27) ONTARIO

New, earliest white grape. Clusters large loosely formed, best quality, sweet, highly flavored. Vine vigorous, hardy, productive. One of the best for home use.

VAN BUREN

This earliest of blue grapes deserves a place in every home garden. Last winter after 20 degrees below zero the vine produced a large crop of grapes and showed no winter injury whatsoever. Fruit ripens late August. Clusters are medium to large, berries medium, dark blue. Quality very good, sweet and juicy. Vine is a heavy producer and vigorous in growth.

SENECA

This new California European type white grape represents a great achievement in modern plant breeding. Fruit is firm, crisp, delicately flavored and may be eaten with skin as California grapes. The vine is as hardy as our native grapes. The yellowish berries are medium sized, cluster medium to large. Will keep to December if picked and stored in a cool place.

PLANT MILLER'S SELECT VINES Grown From Bearing Vines In Our Own Vineyards

PORTLAND

White, New. Cluster and berries large. Fruit of good quality, very sweet, equal to Niagara but ripens 3 weeks earlier. Vigorous, hardy, very productive. Requires close pruning to prevent overbearing.

FREDONIA

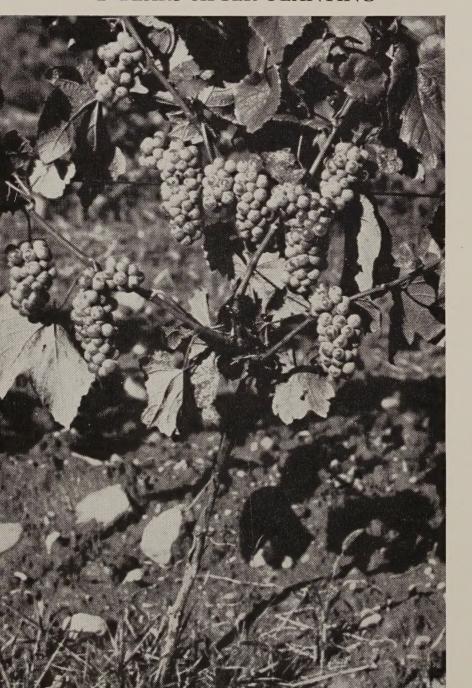

Large compact clusters and large berries covered with a beautiful blue bloom. Very productive, hardy, vigorous. Quality good. One of the best for commercial or home use.

EARLY GRAPES (September 1-10)

WORDEN

A showy blue grape of exceptional quality. Fruit is very sweet, juicy, highly flavored. Clusters and berries large. Very hardy, productive. Needs close pruning. One of the best blue grapes for the home.

AN ONTARIO VINE 2 YEARS AFTER PLANTING

BRIGHTON

A sweet, highly flavored red grape of excellent quality. Clusters are large, berries medium. Very vigorous, hardy, productive. Needs other varieties planted with it because of self-sterility. We recommend Brighton and Delaware as about the best of the red grapes with the possible exception of some of the very new sorts.

MID-SEASON GRAPES (September 15-25)

DELAWARE

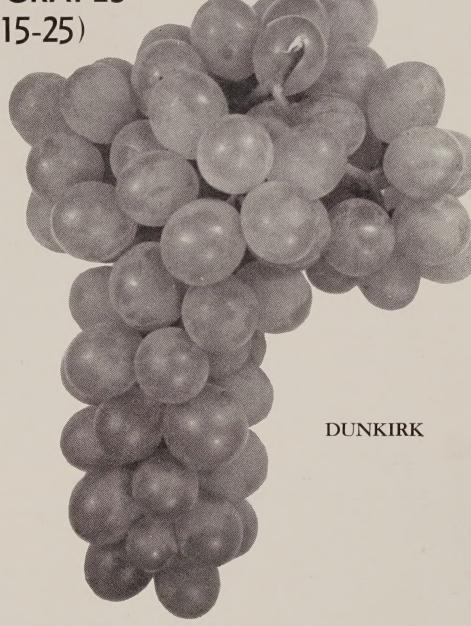

Clusters medium, compact, attractive. Fruit excellent in quality, perhaps the best of all red grapes. Vines hardy and productive. Vigorous on good soils. No planting is complete without a few vines of this fine variety.

NIAGARA

Best known white grape. Clusters and berries large. Quality very good, sweet, juicy. Vine vigorous, hardy, productive.

CONCORD

The most widely grown commercial blue variety. Fine for jellies and grape juice. Vine very vigorous, hardy, and productive. The Old Favorite for Jellies, Jams, Juice.

DUNKIRK

One of the best of the newer red grapes. Resembles Delaware but the clusters and berries are larger. The fruit ripens a few days later and keeps better than Delaware. The clusters are unusually uniform in size and shape. The fruit has a delicious flavor, sweet and rich, with no trace of foxiness. In our test vineyard it has been outstanding during the limited time we have grown it. A full crop of fruit is produced every year and in 1944 it came through with a full crop after –20. The vine is moderately vigorous. We think that this fine variety originated at the N. Y. State Exp. Sta. is one of the best of all red grapes and recommend it highly.

LATE GRAPES (Sept. 25-Oct. 10) GOLDEN MUSCAT 1. Fruit is of High Quality.

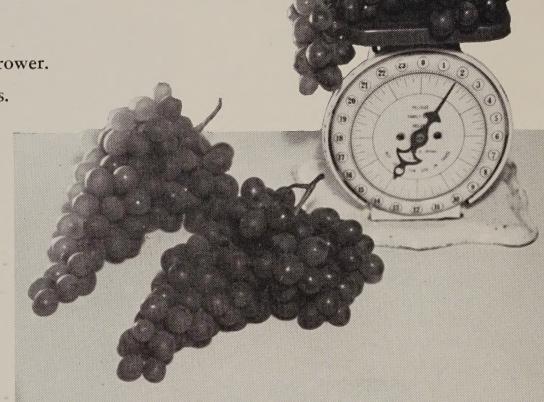

Clusters Extra Large.

3. Produces Big Crops.

4. Vigorous and Rapid Grower.

5. Hardy in Cold Winters.

NO, THERE ISN'T ANY CONCEALED WEIGHT BEHIND THIS GIANT BUNCH OF GOLDEN MUSCAT YOU SEE ON THE SCALES

An amazing new variety producing huge clusters of golden delicious fruit. Very similar to the California grapes but produced on a vine that is hardy in cold regions. Mature vines in our vineyards each year produce clusters weighing $1\frac{1}{2}$ to 2 pounds. Berries are oval, and a beautiful light golden color when fully matured. Quality is excellent, sweet, juicy, and highly flavored. Vine is vigorous, hardy, and a good producer. Needs a long season to ripen fully but is well worth a trial wherever it has a possible chance of succeeding.

SHERIDAN

The best late blue grape and one of the finest of all grapes. Will keep in good condition until after Christmas. Clusters and berries are very large, compact. Quality excellent. Very sweet delicately flavored. Vigorous, hardy and so productive that it requires close pruning to prevent overbearing.

CATAWBA

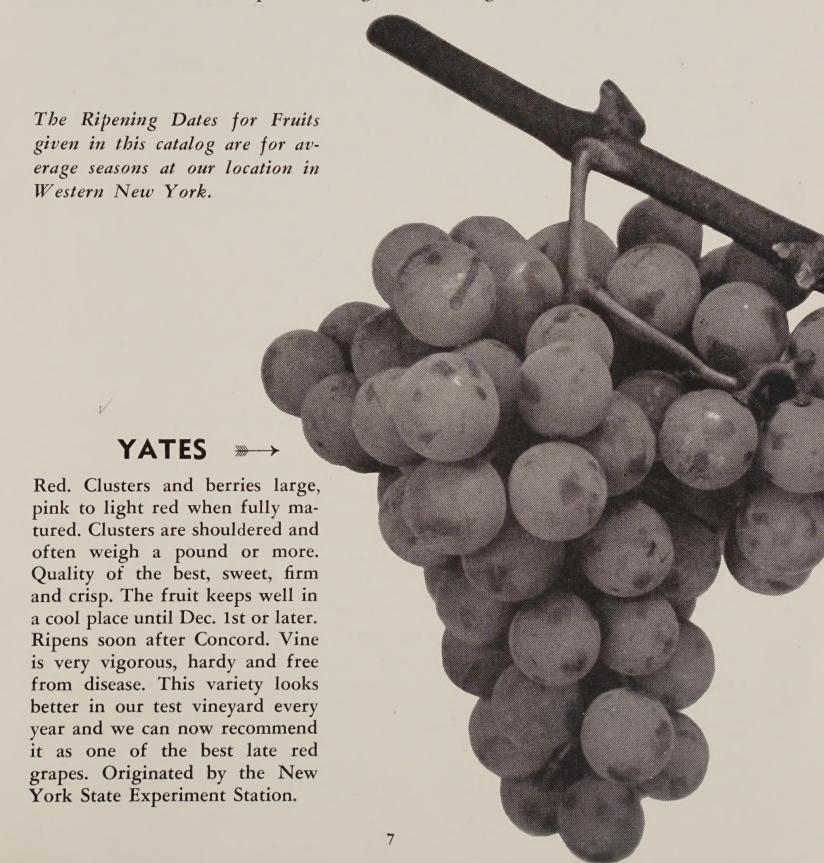

Cluster large, well formed. Quality very good. One of the best late red grapes. Keeps well after picking until late December.

GRAPE CULTURE

The grape is the most interesting and useful of all fruits for the home garden. A few vines will produce a great deal of fresh fruit for home consumption in addition to plenty of fruit for jellies, grape juice, etc.

Few people realize that within the last 20 years a whole series of new varieties have been originated at the New York State Experiment Station which have practically revolutionized grape growing in so far as the home gardener is concerned. As an example, few persons know that Ontario, a new white, and Van Buren, a new blue grape, ripen a full month before Concord and are very useful where the seasons are too short to grow Concord. The grape adapts itself well to all types of soils that are well drained and of average fertility. A sunny location is best, but fruit of fair quality may be grown if the vines are partially shaded. The vines should be planted six to eight feet apart. An excellent place to plant a home vineyard is along a garden fence or better still several rows planted along a side of the garden.

OTHER GRAPE VARIETIES

Many of these grapes have excellent qualities but are not so widely adapted to varying soil and climatic conditions.

NEW VARIETIES

CONCORD Seedless-Blue, small clusters, excellent for pies and preserves.

CURRANTS RED LAKE

A new variety with large dark red berries on long well filled stems. Very hardy and productive. Bears over a long season, July 1st to 20th.

WILDER

A favorite with commercial growers. Large clusters and berries, bright red. Excellent quality. Hangs well on bushes. Ripens July 5th.

PRICES—2 Yr. bushes, each 75c, 3 for \$2.00, 10 for \$5.95

QUARANTINE ON CURRANTS

If you live in the states of Connecticut, Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, North Carolina, Ohio, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia, Georgia, West Virginia, or Wisconsin, we must procure a permit from your State Department of Agriculture before shipping currants. On your order be sure to give county and township where your planting will be made and approximate distance from nearest planting of White Pine. We will refund if the permit is not granted.

STRAWBERRIES

CATSKILL

Strawberries require so little space for the amount of fruit they produce that they should be included in some part of every garden. If we were asked what contributes most to successful strawberry culture we would say early planting, plus good care for the first 6 weeks after planting. Plants should be hoed frequently and the planting kept free from weeds. The first runners produced should be allowed to root as they will make the biggest plants and produce the most fruit the next season.

CATSKILL

Berries large, firm, glossy, dark red, quality equal to the best. Plants thrifty, vigorous. Ripens a few days after Premier. One of the best newer varieties of proven merit.

Best varieties for freezing-Sparkle, Catskill, good; Fairfax, fair.

MILLER'S STRAWBERRIES

ALL STRAWBERRIES SHIPPED POSTPAID

PREMIER

No variety ever introduced has received so much praise or been so widely grown. Adaptability, quality, flavor and frost-resistance are Premier features. One of the best for the home garden or commercial planting.

FAIRFAX

Superlative quality, large size, firm, productive. Fairfax has an unusually long fruiting season. Excellent for the home garden or for shipping.

SPARKLE-LATE

Introduced by the N. J. Exp. Sta. and has proven to be the best late berry for the Northern States. Bears tremendous crops of large brilliant red berries that are firm with a delicious flavor. A vigorous grower and plant maker. Free from disease. Ripens a week after Premier. Recommended for home use and commercial planting.

STREAMLINER

25..\$2.25 50..\$3.95 100..\$7.00

EVERBEARING STRAWBERRIES

Plants set this Spring and kept budded (blossoms removed) until August will produce a good crop of berries throughout the fall until freezing weather. Berries will also be produced in abundance the following year as a June crop and continue to produce in the fall. Strawberries require a fertile soil that retains moisture well.

GEM

Fruit medium to large, smooth and uniform. Berries brilliant light red, of excellent quality. Plants large, dark green foliage, vigorous. One of the best of all everbearing strawberries.

THE NEW STREAMLINER

The sensational new everbearing strawberry that has everything. The strawberry that is delicious to eat without sugar is finally here. The berries are jumbo sized, glossy red and delicately flavored, conical in shape, uniform in size throughout the season. Heavy production of fruit begins in July and continues until November. Under favorable conditions a yield as high as one quart per plant is possible. For freezing just wrap a box of Streamliner strawberries in cellophane. No washing or preparation is necessary, just freeze. When you want them next winter, take them out of the freezer, wash them and they are ready to eat, "sweet and tasty". Every family should have at least 50 Streamliner plants in the garden.

ASPARAGUS

One of the most healthful of all vegetables. Rich in minerals and vitamins. Easy to grow. Once established produces annual crops for years. Makes a delicious frozen product.

MARY WASHINGTON

The best variety at the present time. Rust resistant, strong grower, extra large size stalk, rich and tender, fresh green color. Rated as excellent for quick freezing.

McDONALD RHUBARB

New delicious Red Rhubarb. McDonald tops them all in quality, appearance, and flavor. Also a better grower. Stalks can be cut a year sooner than with the old style green-stalked varieties. Sweeter, requires less sugar than the common Rhubarb. The deep red skin and white flesh, combined with a pleasing flavor, make the best pies and sauce you ever ate.

'TWIST-EMS' help you support plants neatly, quickly, permanently

BOX OF 125, 16 INCH SIZE

65c

Post Paid

Say "goodbye" to unsightly twine and raffia, to needless work with shears. Say "hello" to TWIST-EMS, to gardening fun, to lovely plants neatly and properly supported. TWIST-EMS—strong dark-green "invisible" tapes with wire reinforcing—protect stems, permanently support annuals, perennials, vines, shrubs and vegetables. Grand for flower arrangement. Millions used by successful nurserymen, professional and amateur gardeners. Buy today.

BOX OF 125, 8 INCH SIZE or BOX OF 250, 4 INCH SIZE

Post Paid

These clever plant ties are not just a novelty. We used 'TWIST-EMS' for tying the heavy fruiting canes to the trellis on 10 acres of our vineyards. At the end of the growing season there was scarcely any tie breakage and no girdling damage at all. We accomplished the tying operation in much less time. From this acid-test, we can recommend 'TWIST-EMS' without reservation.

MILLER'S CERTIFIED RASPBERRIES

DISEASE-FREE, VIGOROUS PLANTS THAT GROW

Raspberries along with grapes and other small fruits produce fruit soon after planting. One year plants set this spring will produce a few fruits this year and a good crop the following year. After testing both one and two year plants we find that the one year plants are by far the best. About twice as much fruit is produced the second year from one year plants and they are much easier to get established. We advise planting as early in the Spring as the conditions will permit. Late plantings are usually not satisfactory as the plants are slow in becoming established and many of them may die if weather conditions are unfavorable. Berry plants require very little space and will grow well in any soil that is of average fertility. Nitrate of Soda is the best fertilizer.

TAYLOR

A heavy producer of large, conical, light red berries. Often over an inch long, very firm, and have the most delicious flavor of any red raspberry. The first berries are ready to pick by July 6th and for the next three weeks the bushes are heavy with ripening fruit. A hardy and vigorous grower recommended for home and commercial plantings.

The best of any of the new varieties. Berries large, glossy, firm, attractive and of excellent quality. Our planting has been free from disease and very productive. We have grown many varieties of black raspberries and from our experience we rate Bristol and Cumberland best of all.

INDIAN SUMMER

New everbearing raspberry. First crop ripens early summer. Autumn crop starts ripening in early fall and continues through October. Fruit is large, fine flavored. Plants vigorous, productive. The best fall bearing raspberry available today. Very hardy. Will stand -40°.

CUMBERLAND

Large, glossy, firm. Excellent quality, long bearing season, mid-season to late.

SODUS

Strong, vigorous grower producing an abundance of large, delicious, deep purple berries which do not crumble, even when overripe. This is truly a wonderful berry.

ELDORADO BLACKBERRIES

The best blackberry of all. Free from disease, productive, hardy. Fruit is large, juicy, high quality. Best for pies or preserving. We can recommend planting this variety without reservations.

PRICES OF ALL BERRY PLANTS

1 Yr. 6 12 25 100 \$1.00 \$1.90 \$3.00 \$9.75

MILLER'S BLUEBERRIES

PLANT THE NEW DELICIOUS CULTIVATED VARIETIES

- 1. Fruit 5 Times as Large as Wild Varieties.
- 2. Bear Early, Usually the 2nd Year.
- 3. Bears Big Crops, up to 6 Qts. per Bush when Full Grown.
- 4. Once Planted—Last a Life Time.
- 5. Can be Grown Anywhere with Our Acid Peat Humus.

HOW TO GROW BLUEBERRIES SUCCESSFULLY

The blueberry requires a very acid soil with a high humus content, plus a location where the soil does not become too dry.

Average garden soils are not sufficiently acid to grow blueberries. It is very easy to make them so, by applying 1½ pounds of powdered sulphur per 100 square feet. Then mulch with sawdust to a depth of 6 inches. Sawdust should be applied after planting. This conserves moisture, keeps the roots cool and moist during the hot months and controls the growth of weeds.

Another method of growing blueberries that is even better but slightly more expensive is growing them in Acid Peat Humus. Our acid peat has the rich humus and correct acidity of Ph 4.5 for growing blueberries. No chemicals are necessary. Simply dig a hole 18 inches wide by 16 inches deep and fill it with 2 parts Miller's Acid Peat and 1 part soil. Reserve the top 3 inches for planting the bush, covering the roots with the same mixture. Blueberries can be grown anywhere using this method of culture.

MILLER'S ACID PEAT HUMUS

The ideal material for growing blueberries. Also fine for building and maintaining lawns, roses, etc. One of the best soil builders as it is nearly pure organic matter. One bag contains 2 bushels or enough for planting 3 blueberry plants.

PRICES—Per bag containing 2	2 bu\$1.75 ea	ch
4 bags or more	1.50 ea	ch

JERSEY

CABOT (Early)

First berries are ready to pick in late June. Berries are large, of excellent quality. Plants low, spreading. The standard early variety.

PIONEER (Midseason)

Berries light blue, large, firm, very good quality. Bush grows to medium height, hardy, productive. Ripens about ten days to two weeks after Cabot.

CONCORD (Midseason)

Plants tall, vigorous, upright. Fruit large, light blue, attractive and of the best quality. Borne in clusters resembling those of Concord grapes.

RUBEL (Midseason)

The most productive of the kinds we list. Berries large, fine flavored, a little more acid than other varieties. Ripens after Pioneer. Bush vigorous, grow to 7 feet, should be kept to 6 feet for easy picking.

JERSEY (Late)

Bush grows tall, well shaped, vigorous and productive. Fruit is large, attractive, firm, quality best. Ripens a week to ten days after Pioneer.

We suggest planting at least one plant of each variety to insure a supply of fruit over a long season and for proper pollination.

MILLER'S STANDARD APPLE TREES

STURDY, VIGOROUS TREES WITH HEAVY ROOT GROWTH

RED ASTRACHAN

A tarty red apple. Excellent for pies and cooking. Ripens mid August. Tree bears young. One of the best early sorts.

EARLY McINTOSH

New handsome red apple. Tree very productive. Fruit medium to large, well flavored, resembling its parent McIntosh. Ripens mid to late August. An excellent early apple, which we recommend for all home plantings.

McINTOSH

One of the most popular apples. Tree vigorous, bears young and is very hardy. Quality of the best. Delicious aromatic flavor, beautiful, large, bright red apple. Recommended for commercial and home plantings. Ripens September.

R. I. GREENING

Noted for its fine cooking qualities. Flesh is yellow, quality good. Tree is vigorous and productive. Keeps well in storage. An important commercial variety.

CORTLAND

An improved McIntosh ripening about two weeks later. Large, beautiful dark red, flesh melting, fine grained, juicy. A superior dessert variety. Should be included in all home and commercial plantings.

RED DELICIOUS

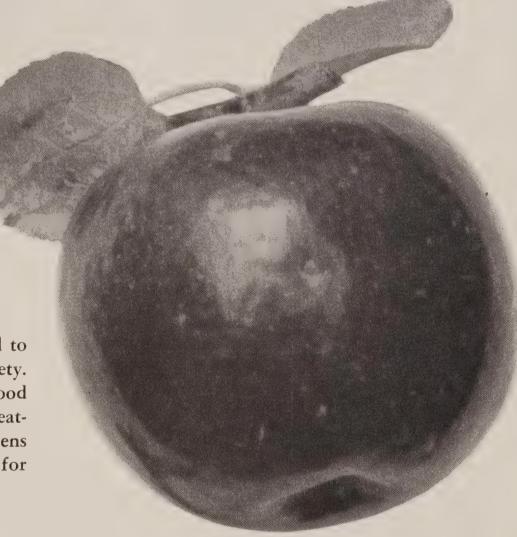

A fine dessert variety. Turns completely red before ripe. Large size, wonderful quality, has a delightful aroma, and a wonderful flavor. Ripens October. A very good variety for the home or commercial orchard.

MACOUN

A new red apple of the McIntosh type. Better quality than McIntosh, ripens later, keeps better. Introduced and recommended by New York State Experiment Station.

BALDWIN

No apple has ever been found to take the place of this fine variety. Large, round, bright red, good keeping apple. Noted for its eating and cooking qualities. Ripens in October. Recommended for commercial plantings.

CORTLAND

NORTHERN SPY

One of our best known and most delicious apples. Fruit always brings a high price. Tree very vigorous and hardy. Ripens late October or early November.

YELLOW DELICIOUS

A bright, golden yellow apple of excellent quality. Firm, crisp, and very juicy. Splendid keeper. Bears young and heavily. Many growers say this is the finest yellow apple.

MILLER'S BEST PEACH VARIETIES

FOR HOME OR ORCHARD

VARIETIES LISTED IN ORDER OF RIPENING

GOLDEN JUBILEE

New large yellow freestone. Ripens from middle to late August. Flesh is tender, fine grained, juicy, and excellent quality. The best early yellow peach. Excellent for canning and home use. Tree productive, hardy.

RED HAVEN

A new, early, freestone, yellow fleshed peach introduced by the South Haven Experiment Station, Michigan. Almost free from fuzz, medium sized, noted for its all over bright red color with delicious flavor of Hale Haven and South Haven. Hangs on tree better than other peaches even when fully ripe. We think this variety well worthy of trial. Ripens August 20th-25th.

HALE HAVEN

New. Fruit is large, yellow with red cheek, freestone. Flesh firm, juicy, very sweet, and richly flavored. Ripens September 1st to 5th. Tree is very productive, hardy. One of the best canning peaches of all.

SOUTH HAVEN

A large golden yellow peach. Flesh firm, sweet, juicy, fine flavored. Excellent for canning and home use. Freestone. Tree hardy and very productive. Ripens September 1st.

ELBERTA

Best known yellow canning peach. Freestone. Fruit large, attractive, good in quality. Ripens early September. Tree hardy, productive.

PRICES PEACH TREES

1 Yr. 4-6 ft.

BEST VARIETIES FOR FREEZING

Excellent: Hale Haven, J. H. Hale, South Haven, Elberta, Red Haven.

A FRUITING BRANCH OF GOLDEN JUBILEE TAKEN IN OUR BEARING ORCHARDS

J. H. HALE

Extra large yellow. Freestone. Free from fuzz. Flesh very firm, sweet, juicy. One of the best for canning. Needs to be interplanted with other varieties as it is self-sterile. Tree hardy and productive. Ripens September 10th.

NECTARINE

A nectarine is a smooth-skinned peach, a sport of a peach. Many object to the fuzzy skin of a peach and to those we suggest trying the nectarine. The flavor of them is both distinct and agreeable and they are delicious to eat fresh or they make an excellent fruit for canning. Nectarines will become more popular when they are better known.

HUNTER

Tree vigorous and productive. The fruit is large, round, yellow with a heavy red blush. It is sweet, juicy, with the true nectarine flavor. The tree as it grows in our orchard is very productive and needs thinning some years. Tree is as hardy as a peach. Fruit ripens September 1st to 5th here. Hunter is self fruitful. Does not need a pollinator.

PRICES: 4-5 ft. trees, each \$1.95

BARTLETT PEARS ON A YOUNG TREE

HARDY SELECTED STANDARD PEARS

LISTED IN ORDER OF RIPENING

Pears grow best on a heavy type soil but can be grown successfully on any well drained soil of average fertility. They are among the most valuable of tree fruits for canning and fresh use and a few trees should be included in all home plantings. Two or more varieties should be planted for proper pollination.

CLAPP'S FAVORITE

Large yellow pear with red cheek. Flesh juicy, fine texture, sweet with fine flavor. Tree is hardy and productive. Ripens middle to late August.

BARTLETT

Fruit large, yellow, juicy, highly flavored. Unexcelled for canning. Tree vigorous and very productive. Ripens late August.

SECKEL

Fruit small. Best quality of all pears. Exceptionally sweet, juicy, delicately flavored. Coppery red to golden brown. Tree is rather a slow grower but very hardy and productive. Ripens September 1st.

BURRE BOSC

A large gourd shaped pear, russet bronze in color. Quality of the best, sweet, rich, fine grained, with fine flavor. One of the best long keeping varieties. Tree hardy, productive. Ripens late September.

SWEET CHERRIES PLANT MILLER'S SELECTED VARIETIES

WE HAVE THE 4 BEST OXHEART TYPES

BLACK TARTARIAN

A large black meaty cherry that is well-known everywhere for its sweet flavored fruit. Tree vigorous and a heavy bearer. Ripens middle to late June.

NAPOLEON

A beautiful yellow cherry with a bright red cheek. Flesh is firm, juicy, very sweet and fine flavored. Bears heavily. An excellent canning variety. Tree is vigorous, well shaped. Recommended for commercial and home planting. White Oxheart type.

SCHMIDT'S BIGGAREAU

An extra large cherry with a deep, rich, mahogany color. Flesh dark, fine grained, tender, with a pleasing sweet flavor. Fruit grows in clusters. Tree vigorous, very productive. Ripens in July.

WINDSOR

One of the best quality dark cherries. Large, juicy and firm, one of the best, if not the best, for canning and eating out of hand. Tree is a rapid and upright grower. Ripens July 15th to 20th.

Write for Prices on Larger Quantities of Fruit Trees

Cherries Grow Rapidly - Bear Young - Ornamental

We-strongly recommend planting one year cherry trees. Experiment Station experts have proved by exhaustive tests that one year trees transplant more successfully and come into bearing more quickly. Sweet cherries should be planted as early in spring as possible. They will not survive late plantings if weather conditions are unfavorable. IMPORTANT. Cross pollination is essential with all sweet cherries. Always plant two or more kinds together to insure proper pollination.

BEST CHERRIES FOR FREEZING

Good: Schmidt's Biggareau, Napoleon; excellent: Montmorency.

LARGE MONTMORENCY

The finest sour or pie cherry grown. The leading commercial canning cherry. The fruit is extra fine in flavor and its brilliant red flesh is very appealing to the eye. A heavy annual bearer. As a superior variety for making those delicious pies and preserves plant Montmorency. This variety is selffruitful, requires no pollinator.

HANSEN IMPROVED BUSH CHERRY

An ornamental shrub, producing delicious fruit. Fruit is large, black and sweet. Fine to eat right from the bush. Introduced by Dr. Hansen of the South Dakota Experiment Station. The silvery green leaves turn red in autumn and the pretty white blossoms add to landscape effect in the spring. Dwarf growing 4-5 feet. Can be trimmed. Usually bear fruit the first year after planting. Plant at least two bushes for better fruit production.

HARDY PLUMS AND PRUNES

FOR HOME AND COMMERCIAL PLANTINGS

STANLEY PRUNE

ABUNDANCE

Medium size red plum with yellow flesh. Sweet and juicy. A good early plum for home use. Tree hardy and productive. Ripens August 20th to 27th.

BURBANK

Fruit large, dark red. Skin thin, covered with heavy bloom. Flesh yellow, juicy, tender, and sweet. Tree large, spreading, productive. Ripens late August.

SHROPSHIRE DAMSON

Small purplish black with heavy blue bloom. Excellent for preserves and jams. Tree very productive. Ripens early September.

STANLEY

New. Fruit large, prune shaped, bluish purple, very attractive. Flesh yellow, juicy, sweet, richly flavored. Tree large, spreading, productive. Bears young. We like Stanley and Fellemburg the best of all prunes for home and commercial use. Ripens early September.

REINE CLAUDE

Fruit large, roundish-oval with red blush. Yellow fleshed, firm, sweet, highly flavored. Very productive. One of the best later plums ripening middle to late September.

FELLEMBURG

Fruit large, oval, purple. Flesh yellow, firm, sweet, fine grained and tender. Tree very productive, spreading, hardy. A delicious prune for eating out of hand, canning and preserves. Ripens early to middle September.

APRICOTS

MOORPARK

A very large attractive apricot with a red cheek. Best quality and richest flavor of all apricots. Tree hardy and productive. Ripens early August. Recommended for home use and roadside markets.

EARLY GOLDEN

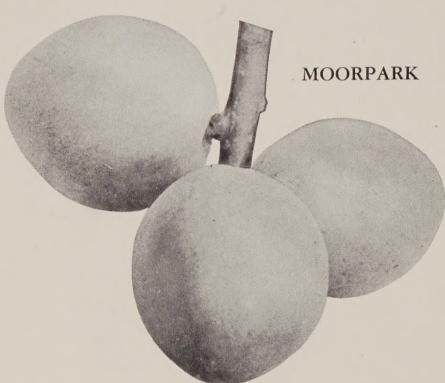

A smooth, fuzzless apricot of medium size. Color, pale orange; freestone, highly flavored and of the best quality. A fine variety to plant with Moorpark. Ripens mid August.

Apricots are not difficult to grow and the fruit is highly prized for making preserves, canning, and home use. The trees are also very ornamental, producing a mass of white blossoms in early Spring.

FILBERTS

EUROPEAN FILBERTS

Our filbert trees are grown from nuts of the Barcelona and White Aveline varieties from our own bearing trees and will produce nuts of good size and quality. Filbert culture next page.

PRICES FILBERTS

FILBERT CULTURE

Filberts are easy to grow and will succeed wherever it is possible to grow peaches. The trees bear young usually about three years after planting. Fully grown trees compare in size with a peach or plum tree. Trees in our small planting have been free from disease and require no spraying. Filberts sucker freely and these must be cut from the base of the tree or a bush will result. Nuts are large and crack the best of any nut. The kernels fall easily from the shell and are not only very tasty but high in food value. The nuts mature in early September. It is a good plan to cultivate or mulch the trees each year. At least two or three trees should be planted as one tree alone will not produce for lack of pollination. Trees should be planted 20 feet apart.

CHINESE CHESTNUTS

CHINESE CHESTNUTS

Not so many years ago the native American chestnut was one of our most common and valuable trees. Chestnuts could be purchased in village and city stores for they were a staple food product. Then the chestnut blight struck, killing all of these fine trees that were so highly prized for their delicious nuts and valuable timber. The U. S. Department of Agriculture realizing that our chestnut trees were doomed sent men to the region of China where the climate was much the same as ours. This was some 20 years ago and since that time trees that were brought back have fruited and the best seedlings selected for propagation. Chinese Chestnuts average larger and are equal if not better than our native nuts. They are sweet and delicious to eat and a real treat to those who have necessarily been forced to forgo the pleasure of eating our

native nuts. The trees grow rapidly after they become established. Nuts are produced in about four years although some seedlings bear earlier. The tree is spreading in habit of growth much like an apple tree and should be spaced the same distance in planting. Fall or Spring planting is equally good. After planting the trees should receive clean cultivation until August 1st. In the absence of cultivation the trees should be mulched. They will stand our coldest winters without injury if late cultivation is not practiced. No fertilizer should be used the first year but the trees should be fertilized and cared for the same as fruit trees in subsequent years. Chinese Chestnuts are not a novelty by any means. They are here to stay. Two or more trees required for proper pollination.

THREE IMPORTANT ADVANTAGES IN ORDERING FROM MILLERS

HIGHEST QUALITY STOCK

CAREFULLY PACKED

FRIENDLY SERVICE

- 1. YOU GET ONLY THE HIGHEST QUALITY, TRUE-TO-NAME STOCK. Well-branched fruit trees, grape vines and small fruit plants with thick fibrous roots and live sturdy tops. Every plant guaranteed to please and sold at a reasonable price.
- 2. Your order is packed in double moist material. The roots cannot dry out and we guarantee delivery to you nursery fresh, ready to grow.
- 3. We include with every order our Free Planting Guide, a 12-page 6x9 inch illustrated booklet that tells how to plant and care for fruit trees, grapes and every other item we sell. This Guide is new this year. Written by us to assure your success in growing fine fruit.
 - (On an early order we send this Planting Guide with the order acknowledgement. On later orders we include it with the order.)

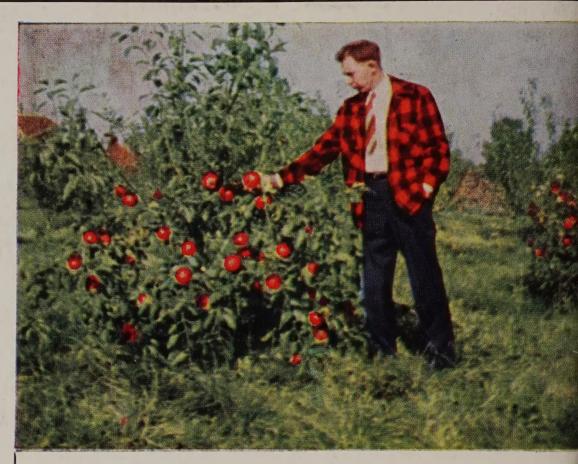

SHIPPING

At the present time is costs much less to ship small packages by parcel post than by express. If you wish your order shipped prepaid add 5% to pay for packing and shipping. Otherwise your order will be shipped express, shipping charges collect.

- HOW TO REMIT. Remit by check, or money order. No order can be accepted for less than \$1.00.
- GUARANTEE. We guarantee all of the nursery stock sold by us to be true to name and will replace free of charge any plant or tree that proves otherwise. At no time will we be responsible for any sum greater than paid for the stock.
- REPLACEMENTS. We will replace at one half price any stock that fails to grow providing you notify us by September 1st, 1949.
- SHIPPING SEASON. We can ship spring orders until June 1st. However, we advise early planting and stock shipped after May 15th is at buyer's risk. Our fall shipping season starts about October 20th.
